

**Thank you for your purchase!**

Our two piece phone stand is designed to be separated into two pieces for ease of storage and travel but while assembled it is large enough to accommodate most phones while charging. The two pieces are held together with spring tension from two built in clamps which require a specific approach to assembly.

Each piece has a small dot molded into it as seen here:

When properly assembled the dots will line up, as seen here:

To assemble the two pieces you must slide the upright into the base laterally, as seen here:

Once they are in the position pictured above you simply twist the upright piece and the dots will come together, snapping into place with the phone stand ready to use.

Never attempt to push the upright into the smaller base directly with the neck hitting both clamps at the same time as pictured here:

Doing so will cause it to bind and forcing it can damage the stand.

For a video of the stand being assembled please go to our Genesys listing. We have a video posted there showing how the two pieces go together. If you have any trouble or question, please message us.

If you have any concerns at all about your purchase don't hesitate to reach out to us. We want you to be completely satisfied!

If you love your purchase please consider taking a moment to leave a review. Reviews are important for buyers that may not be familiar with us or with 3D printing.

Stay tuned for more 3D printed products to be available soon!

Sincerely,  
Aaron Lorton
